

## **PRESS RELEASE**

La Chaux-de-Fonds, Switzerland, 7 October 2013

### **FKG presents TotalFill, a revolutionary pre-mixed Bioceramic sealer**

**For FKG Dentaire SA, of Swiss city La Chaux-de-Fonds, all stages of each dental treatment should benefit from the very latest technology and best products. FKG is bringing a revolutionary Bioceramic sealer to market. With reduced setting time, no shrinking during setting and increased stability, TotalFill BC Sealer is a real ally for dentists and endodontists alike.**

This new radiopaque sealer system is revolutionising endodontic treatment. The Bioceramic sealer comes pre-mixed in a syringe and is extremely simple to use. Thanks to TotalFill's ability to bond to both dentin and TotalFill BC points, a perfect seal is achieved, with no shrinkage. The excellent fluidity of the sealer ensures a perfect three-dimensional fill.

*“Patient comfort, as well as easing practitioners’ workloads, have always been our guiding principles in our goal to offer the highest performing instruments and products» emphasised Thierry Rouiller, CEO of FKG Dentaire. « TotalFill BC Sealer, thanks to anti-inflammatory and antibacterial properties and to its biocompatibility, helps prevent post-intervention complications. “*

*“These products represent a major advance in bonded root filling restorations. A high pH during setting, biocompatibility when set and dimensional stability are important advantages over traditional root canal sealers” » said Dr. Martin Trope, clinical professor at the University of Pennsylvania.*
